

**FOR IMMEDIATE RELEASE:**

## **Precyse Solutions and Prince William Hospital Sign Long-Term Total HIM Outsourcing Agreement**

**Wayne, PA, February 16, 2005** – Precyse Solutions and Prince William Hospital (member of Prince William Health System, Manassas, Virginia) have signed a three-year, \$7 million total HIM outsourcing agreement. Precyse Solutions will staff, manage and coordinate all functions of the HIM department and Medical Transcription services for the hospital.

Prince William Hospital had experienced chronic staffing issues within its HIM department. Additionally, Prince William wanted to ensure best practice implementation throughout all HIM functions and was finding this difficult to accomplish without a stable, experienced HIM team. Outsourcing to Precyse Solutions will provide Prince William with the depth of knowledge and experience it needs to make its HIM functions and related services operate efficiently. Associated departments such as billing and admissions are expected to benefit from this new relationship as well.

Robert Riley, Chief Financial Officer for Prince William Hospital explains the impetus for outsourcing, "Precyse has demonstrated their ability to fit within an organization's existing structure while injecting new talent and resources where and when they are needed. This is exactly what Prince William Hospital needed to bring the HIM department to a new level, and we are looking forward to achieving even more in our new relationship with Precyse."

Jeff Levitt, founder, Chairman and CEO of Precyse Solutions remarks, "We are pleased that Prince William Hospital has selected Precyse Solutions as its outsourcing partner. We look forward to helping them realize their financial and process goals."

### **About Precyse Solutions**

Precyse Solutions is an industry-leading provider of outsourced Health Information Management/Medical Records (HIM) services to hospitals and healthcare organizations within the U.S. Healthcare providers utilize Precyse's services to accelerate cash flows, reduce their operating expenses, streamline workflow processes, improve the capture and coding of clinical information, and maintain regulatory compliance.
