Precyse Expands Transcription and Remote Coding Services to Include Automated Speech Recognition

- *Expanded technologies will maximize workflow, efficiency and reliability*
- *PrecyseNet™ technology platform is the first and only software platform to support coding, transcription and ASR on single, secure, web-based platform*

PHILADELPHIA, PA – June 25, 2007 – Precyse Solutions, a leader in health management information services and solutions, today announced the expansion of its transcription and remote coding services to include Automated Speech Recognition (ASR). The new ASR technology is built directly into Precyse's workflow engine, making it transparent to the dictator, the transcriptionist and the coder, while creating tremendous efficiencies and productivity improvements for the hospital.

"We see this application of ASR as another way that we can improve information management within hospitals," said Rob Healy, President of Precyse Solutions. "High quality and an efficient transcription process can have tremendous impact on cash flows, management costs, the reduction of errors and physician satisfaction. ASR is a critical step in achieving that next level of speed and quality."

The Precyse ASR offering brings together M*Modal's AnyModal™ conversational documentation services (CDS) technology services platform (recognized as the leader in conversational speech recognition), with the secure PrecyseNet™ workflow engine, the only platform in the industry to combine coding and transcription software and CDS technology into a single, web-based platform. When combined with Precyse's electronic signature and document versioning capabilities, the Precyse ASR offering provides both a scalable transcription and remote coding technology that utilizes speech recognition and speech-understanding technologies to efficiently translate dictated recordings into structured and encoded documents.

About Precyse Solutions

Precyse Solutions is an industry-leading provider of outsourced Health Information Management/Medical Records (HIM) services and technologies to hospitals and healthcare organizations. Precyse's services help healthcare providers to accelerate cash flows, reduce operating expenses, streamline workflow processes, improve the capture and coding of clinical information and maintain regulatory compliance.
